Billing	888.335.1135

Interventional Radiology is a specialized subset of radiology which uses minimally invasive techniques to administer majorly important therapies! An interventional radiologist has special skills and training in body and vascular anatomy and the use of wires and catheters to access various parts of the body and administer therapies. Most procedures require only a puncture-type incision. Therapies may include treatment for symptomatic uterine fibroids, certain types of cancer-especially involving the liver-and vascular abnormalities, such as internal bleeding or aneurysms. Another common procedure is Vertebroplasty or Kyphoplasty to put cement into fractured vertebrae to provide symptomatic relief. Piedmont South Imaging has put together a team of highly skilled Interventional Radiologists to meet the ever-growing needs of our community.

### **Scott Faith, M.D.**

Dr. Faith is well known in the Southern Arc from his association with Piedmont Fayette Hospital and now Piedmont Newnan Hospital. You may also recognize his name from Lifestyle Magazine's "Top Docs" articles in years past. Dr. Faith's particular interests are Uterine Fibroid Embolization to treat symptomatic uterine fibroids with minimally invasive technique, and Kyphoplasty to treat vertebral compression fractures. He is also proficient in vascular interventional radiology and CT-guided biopsy procedures.

### **Matthew Gimpert, M.D.**

Dr. Gimpert comes to us from Rush University Medical Center with a wide variety of skills in Vascular and Interventional Radiology. His particular interests are treating uterine fibroids with Uterine Fibroid Embolization, and treating certain cancers with interventional chemoembolization and radioembolization. His expertise makes him current on the latest advances in these fields. He is also proficient in Kyphoplasty and Vertebroplasty for vertebral compression fractures. Dr. Gimpert provides services at both Piedmont Fayette and Piedmont Newnan Hospitals.

### **Michael Pont, M.D.**

Dr. Pont joins our group with over twenty years of experience in radiology and Interventional Radiology. His special interests are Uterine Fibroid Embolization, Kyphoplasty and Vertebroplasty to treat vertebral compression fractures, and Neuroradiology and Stroke Treatment. Dr. Pont has served as faculty instructor with Kyphon, teaching techniques in Kyphoplasty. He currently practices at both Piedmont Newnan Hospital and Piedmont Fayette Hospital.

### **Fawzi Mohammad, M.D.**

Dr. Mohammad provides Interventional services at both Piedmont Newnan and Piedmont Fayette Hospitals. He brings with him the latest techniques in both Vascular and Oncologic Interventional Radiology from MD Anderson and Baylor University Medical Centers. He is also proficient in Kyphoplasty and Vertebroplasty for vertebral compression fractures. His special interests include treating uterine fibroids with Uterine Fibroid Embolization and treating certain cancers with chemoembolization and radioembolization.
